Large lilac blue flowers with a striking orange center are produced on 12 to 14 inch stems about the middle of June. A strikingly beautiful plant in the rock garden or in any perennial bed. While very striking in its permanent location, at the same time the flowers can be cut and used in the better types of floral pieces. NEW PINK BUDDLEIA

Charming

A Distinct New Introduction

See Color Plate Page 17

Develops into a beautiful bushy plant, growing to a height of 5 to 6 feet and almost the same in spread. Makes a very striking plant in any landscape, flowering from the middle of June until frost. The individual flower heads are quite large and when fully developed they make a solid round head opening full length.

The flowers are a clear lavender pink, an entirely new color never before seen in Buddleias. On bright sunny days they appear clear pink, while in floral work under electric lights they are a pleasing soft pink. In basket work or the larger types of floral designs this Buddleia can be used as the main flower; because of its desirable color it blends beautifully with light blue Delphiniums or practically all seasonable flowers. This is really a pink Buddleia, entirely different from any other varieties in cultivation today. We very highly recommend that you make a planting of this remarkable new Buddleia Charming.

Our large planting of Gypsophila Bristol Fairy when in full flower reminds you of ocean mist. The above is a field view of one of our plantings. For this Spring we have the most excellent quality field grown roots and also well established pot plants.

Very Popular Gypsophilas

GYPSOPHILA BRISTOL FAIRY

The value of Gypsophila in the florist trade is now universally recognized and really no florist can afford to be without a nice planting. During last summer we grafted large quantities of Gypsophila Bristol Fairy, using field grown scions. Our plants are now properly rested and full of vitality. They are well established in 3 inch pots and are in excellent condition for planting this spring. Gypsophila produced by this method will start off growing immediately after planting and in early summer will produce flowers, continuing during the entire season. Under ordinary conditions, they should provide good crops of flowers for a period of years.

Due to our method of propagation, we are recognized as leaders in the production of fine quality Gypsophila. Annually we ship very large quantities to all parts of the United States. We are again prepared to take care of your requirements and assure you that you will have good results if you make a planting of our plants.

Silver Lace Vine

Lonicera Heckrottii Goldflame Honeysuckle

A superlative variety; beautiful, hardy and versatile. The large flame-coral trumpets lined with gold, fragrant after nightfall, appear in immense, showy clusters the same year the plant is set out. Reaching its full glory of bloom in early summer, it nevertheless flowers abundantly from May until frost. Dark blue-green foliage, disease and pest free, is attractive in itself and makes a perfect background for the brilliance of the flowers. Allowed to grow naturally, Goldflame will climb a trellis or spread as a ground cover; pruned it becomes a striking specimen shrub while if planted in a row and sheared it gives a smashing effect as an everblooming hedge.

Strong 2 year vines, Per 10, \$3.50; Per 100, \$30.00

Tamarix Hispida Aestivalis Rubra

A lovely new bright wine-red colored form of the popular summer-flowering Aestivalis that arrests immediate attention; the handsome flowers contrasting well with the graceful gray-green foliage. This new variety has all the desirable qualities of its parent, including great profusion of bloom and flowering at a time when there is a dearth of color in the shrubbery border. Flowers and foliage are excellent for cut flower work.

2 year old plants, Per 10, \$6.00; Per 100, \$50.00

Baby Rambler Roses

Good Quality No. 1 For General Planting

Baby Ramblers are now being used for bedding purposes on a large scale. In parks where color is desired large quantities are now being used in place of Geraniums. The Baby Ramblers will come into flower in early June and continue all summer long, really creating a brighter showing than the general run of Geraniums. In addition to their beauty the first summer after planting, they are hardy and will continue producing the same showing for many years. We highly recommend Baby Ramblers for show places in the landscape where real color is desired.

BABY RAMBLER. The original light crimson sort with fine heads of small flowers.

EDITH CAVEL. Crimson with distinct white eye.

ERNA TESCHENDORFF. A bright red sort, much brighter than the original Baby Rambler.

GLORIA MUNDT. Brilliant orange-scarlet flowers in huge clusters.

GOLDEN SALMON. Large clusters of striking reddish-orange buds and blooms.

LA CARNO. Brilliant glowing oriental red.

MRS. R. M. FINCH. Large, double rosy pink flowers.

RED ORLEANS. Very striking red.

SUPERBA. A dark crimson.

TRIOMPHE DE ORLEANS. Double bright cherry red.

MAGNA CHARTA. (Hybrid Perpetual). A strong variety with large pink flowers
